

Construction Update - July 3, 2024

MEDIAN REMOVALS TAKING PLACE

Over the last few weeks, the contractor completed installation of temporary traffic signals and continued with utility work throughout the project area.

This week the contractor will begin installing storm sewer down the center of Arlington Heights Road south of Checker Road. Motorists should watch for trucks entering and exiting the flow of traffic as this work is completed.

Traffic flow remains one lane in each direction in the outside lanes. Please note that if the contractor has an open trench in front of a side street, there will be no left turns allowed across the trench until the pavement can be restored temporarily by the end of each day. Motorists wanting to access side streets through a left turn across the active work zone will have to turn around safely at the next opportunity and approach from the direction where they can enter the side street with a right turn.

Motorists wanting to exit the side street by turning left across the active work zone will have to exit right on Arlington Heights Road and turn around at the next safe opportunity or choose a different route.

The contractor strongly advises drivers to take alternate routes and for drivers to exercise caution when traveling through the project area.

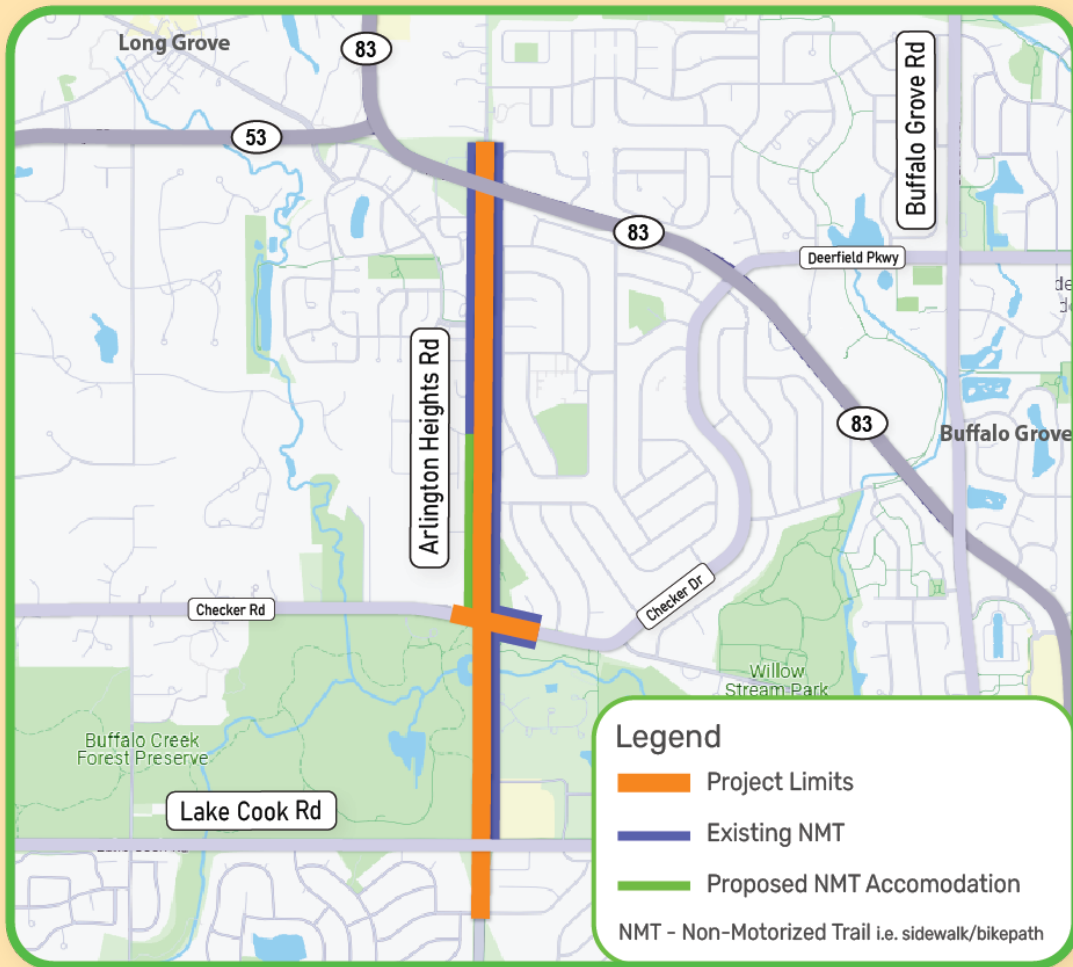

The project team wishes the community a safe and happy Fourth of July!

Median pavement removal on Arlington Heights Road

Project Map Area

Construction on Arlington Heights Road starts north of IL-83 and continues southbound past Lake Cook Road and will impact traffic flow until the fall 2025.
